------------------------- MinEd is a minimal and fast text editor based on pure Unicode character editing. The basic behavior is based on the Tab key, while other common navigation tools like movement, selection and function keys are conveniently placed at a position where they are actually used. Since it is impossible to move all keys to the "lower case" position, this editor allows you to define your own specific key positions with any shortcut key you want. Requires: ------------------------- It is recommended to have GNU Readline and GNU Emacs installed. Also, in order to display Unicode characters, a C or C++ compiler with the Unicode support is needed. Usage: ------------------------- All commands and features available through MinEd can be accessed either directly from the keyboard (using shortcut keys), or through a menu-driven interface. This is a list of the major commands that are available: ! [Name]
