Note When you read this chapter, you'll notice that some of the suggestions sound like heresy, especially when it comes to altering Photoshop files. Please don't let that scare you off; the tried and true methods of editing images described in this chapter are the same methods that have been used by graphic artists for years. ## Manipulating Layers with Masks Photoshop is a layer-based program, and layers are the main way that you manipulate your images in Photoshop. When you make edits in Photoshop, you modify the image layer. You can also modify the appearance of layers when you create a new layer. You can create a new layer by selecting **Layer** ▸ **New** and then the appropriate options for the layer type. To apply an adjustment to a particular layer, you need to have that layer selected (its name appears in parentheses just above the Layers palette). The following sections explain the various ways you can use a layer's transparency and shape to alter the appearance of an image. You'll also learn how to work with different Photoshop adjustment layers and some of Photoshop's other layer-based tools.

Many professionals use Photoshop and many hobbyists use Elements. The following list will cover the most useful features that these users will use. 1. Selection Photoshop has many selection tools: marquee, lasso, magic wand and polygon. They are essential tools for selecting parts of an image. The good thing about living near the ocean is that it brings a plethora of beneficial wildlife into your backyard. While your garden may not get the same wildlife benefits as your backyard, it has its own set of allurements for nature enthusiasts. Take a look at some of the most beneficial plants around your home: 1. Perennials Most people know that perennials are plants that live for more than a year. In fact, there are more than 5,000 perennial species. Perennials have an instant appeal for many of nature lovers. While flowers might die off after a long dry period, perennials tend to stay alive. Some perennial flowers like Nasturtiums are known for their ornamental appeal. They are beautiful in the spring and also have edible flowers in the fall. You will find these species flowering in your yard year after year. 2. Ground cover If you love a well groomed lawn, the ground cover plant is perfect for your home's backyard. Ground cover plants are low maintenance. These types of plants grow to a relatively small height and are attached to the soil. Plants such as Golden Trumpet and Ground Ivy are perfect for the environment. If you love a neat lawn, don't think these are just for show. These plants have a great ability to retain soil nutrients, and are also beneficial for water conservation. 3. Shrubs Shrubs are the bigger, mature plants. They tend to grow to a height of several feet and have a wide variety of life cycles. You can choose from hundreds of shrub species including Myrtle, Lignum Vitae, Mango and Corn. While these plants are not as universally friendly as the above-listed perennials, they are great for your yard. 4. Climbing vines Climbing vines are climbers that can attach to structures or trees. As the name suggests, they're excellent at climbing. They also provide great support for other plants. They are great for interweaving with roses, placing alongside trees or clinging to a fence. 5. Succulents Succulents have become extremely popular. They are typically plants that are well-suited to the desert. In fact, they are one of the easiest plants to grow. The only thing you need to worry about is watering them. In general, they don't need it much. All you need to do is water

Subarachnoid haemorrhage: speed of diagnosis and blood pressure. The speed of diagnosis of intracranial haemorrhage was measured. A series of three cases in which the clinical diagnosis of a subarachnoid haemorrhage was delayed are reported. In the first two cases, an inadequate examination of the cerebrospinal fluid (CSF) and blood in the lumbar puncture (LP) led to the erroneous conclusion that no haemorrhage had occurred. In the third case, however, the intracranial haemorrhage was found earlier because the initial examination of the CSF revealed macroscopic haemorrhages. In each case, the diagnosis of subarachnoid haemorrhage was made after the patient developed a sudden high blood pressure (BP) usually associated with an abrupt head-up position. The importance of carefully examining the CSF and performing repeated blood sampling in order to detect intracranial haemorrhages before the occurrence of a sudden high BP is emphasised.Q: Swift: UINavigationController pushViewController unexpected result I'm new to Swift and I'm having trouble to understand why this method (same for popViewController) can lead to different results. When I call on my view controller (the new view) to begin the animation, the view controller shows without animation. Then, when I press a button that should open a modal view controller, the view controller starts the animation but when it's finished, I get the old view controller because a transition was made and the navigation stack was pushed on this view controller that was just displayed. If I cancel the transition, the navigation stack is restored correctly. What's going on? class ViewController: UIViewController { override func viewDidLoad() { super.viewDidLoad() let btn = UIButton() btn.setTitle("Модальная", forState:.Normal) btn.titleLabel!.font = UIFont.boldSystemFontOfSize(12) btn.tintColor = UIColor.green b
