AutoCAD has the following features: CAD 2D drawing and printing 3D modeling CAMs Architectural design Geomatics Geometry modeling In addition to the features above, AutoCAD also provides access to Autodesk's web services and API's via the application programming interface (API). This API allows external third-party applications to use the functionality provided by Autodesk's software. For example, a text-editor application can use the API to display the contents of a drawing document. While at the time of its introduction, the software was primarily used to design mechanical parts, by the early 1990s AutoCAD had become widely used for architectural drafting, landscaping, transportation design, and engineering. AutoCAD's success is largely attributed to its extensive menu bar, which enables users to accomplish a wide variety of tasks with minimal typing. AutoCAD includes hundreds of predefined tools and options; however, these tools and options can be replaced or supplemented by adding new ones. Most commonly, users add command codes to the menu bar of the application's user interface. The command codes, known as AutoCAD commands, are described in the AutoCAD application user manual. The application is available in the following editions: AutoCAD Architecture, AutoCAD LT Architecture, AutoCAD LT Maintenance, and AutoCAD LT Production. Additional editions of the application are available for Windows, macOS, iOS, Android, and Linux operating systems. In addition, the application can be updated and installed on multiple computers. The following table provides a quick overview of AutoCAD features. See the AutoCAD application user manual for a detailed description of each feature. Usage During the late 1980s, the AutoCAD engineering department at BOMI developed a series of products and services for the metalworking, machining, and manufacturing industries. This work formed the basis of what was eventually released as AutoCAD Metals in 1992. History During the early 1980s, the development of AutoCAD began as a joint effort between BOMI, a steel manufacturer and machinery shop, and Savoy Systems, a small but capable computer consulting company. In the late 1980s, Savoy Systems was purchased by then-named computer consulting company, DeSilva & Philips, Inc. DeSilva & Philips, Inc. went on to become AutoDesk in

AutoCAD LT Autodesk introduced a new system architecture called the "Reconcept" architecture in 2017. In 2017 Autodesk Autodesk announced the availability of Autodesk 3D 2018 for iOS as an alternative to Autodesk 3D Design. Autodesk 3D Design is a major upgrade to 3D design and may have been an iPad competitor. Revit Architecture AutoCAD Architecture is a 2D/3D modeling tool for building models that can be used to create architecture, engineering, and interior design drawings. It features a unique user interface (UI) that does not depend on a mouse for drawing, or a tool bar to manipulate objects. It has the ability to translate symbols from other CAD packages to ARCH, and later, BIM standards. SketchUp AutoCAD Architecture 3D is a CAD application to create 2D/3D architectural designs and provide the modeling tools to create and modify 2D drawings. SketchUp was released for AutoCAD in 2003. It provides a unified interface to create 3D objects based on 2D drawings or 2D objects. Demo 3D Demo 3D is a mobile CAD app. It was introduced in 2017 by Autodesk to demonstrate technology advancements in AutoCAD Architecture. There is also a web portal that integrates 3D SketchUp designs and modeling in AutoCAD Architecture. Autodesk Revit Architecture Autodesk Revit Architecture is a 2D/3D modeling tool for building models that can be used to create architectural, engineering, and interior design drawings. It features a unique user interface (UI) that does not depend on a mouse for drawing, or a tool bar to manipulate objects. It has the ability to translate symbols from other CAD packages to ARCH, and later, BIM standards. 3DSketchUp 3DSketchUp is a CAD application for 3D architecture design, engineering and visualization. It was introduced in 2011 by Autodesk to extend the capabilities of AutoCAD Architecture, and later, to Autodesk Revit Architecture, SolidWorks and other CAD applications. Rhinoceros Rhinoceros is a free or commercial 3D modeling application from Robert McNeel & Associates, which can import various files. The software supports multi-resolution modelling and scripting. Updates References Category:2D animation software Category:CAD editors Category:2D graphics software Category:MacOS graphics softwareThe present invention relates to a shoe having a construction that easily allows for cleaning and maintaining. Among walking shoes, a shoe with an upper of synthetic leather is known. When cleaning, it is troublesome to wipe off soil such as mud with a rag. Further, after cleaning, the rag must be rinsed and treated with a cleaning agent. This treatment requires a lot of time and labor. In order to solve the above problem, Japanese Utility Model Laid-Open Publication No. Hei 3-4852 discloses a shoe that has a water-repellent laminate layer consisting of a rubber layer and a water-repellent layer. However, the material of the water-repellent layer consisting of a resin and a fluorine compound has a problem that the water-repellent layer peels off. Japanese Patent Laid-Open Publication No. Hei 8-142257 discloses a shoe that has a construction with a water-repellent layer consisting of a fluorine compound and a silane compound which is formed by mixing and reacting the two compounds. However, the fluorine compound that is an essential component of the fluorine compound-containing water-repellent layer in the above construction and the silane compound that is an essential component of the silane compound-containing water-repellent layer are large in molecular weight and it is difficult to uniformly disperse them in a resin. For this reason, the above water-repellent layer has a problem that the water-repellent layer peels off. Further, the fluorine compound itself is expensive, and the use of the fluorine compound causes an increase in manufacturing costs. In view of the above problem, it is an object of the present invention to provide a walking shoe that can easily be cleaned and maintained and which does not peel off.
