The best advice we can give you for using Photoshop is that you will need to familiarize yourself with the basics, but even if you are fully confident that you know them already you probably do not know them well enough to be confident of your best practice. At the same time, you will want to understand how the different features work, and when to apply them. In this guide, we'll be covering essential Photoshop for graphic designers and photographers. Some Photoshop Basics 1. Open Files When you open Photoshop, you are going to first have to pick the document you are going to edit. How to load the Photoshop document: Open from the menu at the top of the window, File > Open, or drag the document from a Finder window. You can change the name of the document by using the "Save As" command. You can also change the file type if you want. How to create a new document: For clarity, when you make a new document in Photoshop, it will always be a new file, not a copy of another one. So, in other words, make sure the file name is different and save over the original. 2. Save Files When you make changes to your document, you are going to want to save them to your computer. How to Save a File: Open the file you want to save in the main window. You can either use the "Save" or "Save As" commands. If you click the "Save" command, it will open the "Save to" dialog box. You can navigate to the same place you used to open the file, or you can navigate to a specific folder where all the new files will be saved. If you want to keep working on the same file, but save it to a different folder, you can select a specific folder and use the "Save As" command. When you first open Photoshop, it creates a default folder called "Untitled" (all docs are called Untitled by default). If you want, you can change this folder to a different one that you have set up (call it a folder where all of your new docs will go for example). In this folder, it will keep all of the new files. Opening Photoshop Settings: To open Photoshop's Preferences window, you can go to the main menu at the top of the window 05a79cecf

You are here Vertigo has made us so damn happy, it is time we spoke of our experiences and share them with other people who are in their journeys of experimenting with it. First, I want to say how much I feel a deep and personal kinship with people who are suffering from anxiety and depression. I see a lot of them all around me, and I am deeply affected by their sensitivity, their unquenchable thirst for beauty and a genuine sensitivity and attachment to life, as well as their innate goodness. I feel a great deal of empathy for you and I wish that I could take all your hurt away. If you are reading this and thinking "I feel like she's talking about a religion", well, ok, you might be right. Anyways, this is the first step on my journey to wake up to how I have been living my life, and how I am deluded by all the bullshit I have been fed throughout the years: One God, one religion, one brand of spirituality that everybody is supposed to subscribe to. I challenge you to think about the life-changing experiences that are being shared all over the world, in places we would have never had the chance to see, and where we couldn't even have imagined how profound an impact they would have. I want you to experiment with your senses in a new way. Invert what you know about life, life is never about survival, it's about meaning, death is the meaning, and so on. Fidelity, loyalty, believing that there is only one thing that makes things right, that everything exists and flows according to the laws of nature, and that "one God", the One, is in everything, the God, the eternal Source, that is the one and only thing in the Universe that exists forever. It is bigger than us. It is bigger than life. It is bigger than our little planet. It is our One and only Creator, and we are meant to be adoration, and unconditionally love it. This is the real meaning of life. We are all the same, and we all have the same needs. We are all part of one another, we are all one, we are all on a spiritual quest. There is only love. There is only love. There is only Love. If you are not familiar with the practice of the Kabbalah, it is an esoteric spirituality based on the esoteric writings of the Jewish mystics, known as the

Menu The epitome of sentimental is a portrait, a representation of the past in the present. The artist is always depicted as superior and calmer than the subject. The portraitists with their artistic skills are the demi-gods of our time, the divine creators of our world with all its splendours and all its vices. There they are, as portrayed in ancient paintings, as present as if they were not that long ago. Today, we are going to see how we can capture our perfect world in a painting with the help of Gimp. We are going to download the Ocean of Clouds texture, the perfect tool to depict tropical landscapes and clouds with amazing blending possibilities. In this tutorial we are going to use some basic techniques, such as painting and brush manipulation. Step 1. Preparing the canvas To represent a cloudy and humid environment in a painting, we are going to start with the proper canvas. The canvas should be selected with a soft brush in the highest setting, a brush size of around 180-200 pixels. We are ready to go. Step 2. Painting the clouds We are going to start with a slight ambient colour over the whole canvas. A perfect starting point for our painting is a colour called "Ocean of Clouds". To paint the clouds and water we will be using a default Monochrome brush. Set it to 200% opacity and the Softness setting to 40%. Fill the brush with the Ocean of Clouds colour. The clouds are going to be heavy, flowing and soft, therefore they need to be painted using a brush which we will discuss later in this tutorial. Step 3. Painting the palette The picture is starting to take shape, and we are finally going to start painting a palette. We are going to paint the bottom of the ocean in a single colour to create the colour scheme of the painting. We are going to start with a white colour and brush it with a fine brush setting. A fine brush setting is a fine brush that doesn't allow you to paint beyond the canvas. Step 4. Painting the water We are now going to paint the surface of the water to give it more depth and water. First, we are going to outline the canvas with a soft brush with a very light colour, and then add a colour with a darker value. The colour chosen to create a dark rim of the ocean is
