

---

happens when you bind the change event using `click()` without a conditional, a bind will always fire. The correct way to do it is `$('#input[name="twitter"]').prop('checked', true);`

```
$('#input[name="twitter"]').on('change', function() { $('#input[name="twitter"]').prop('checked', true); }); //
```

Don't forget the semicolon But you don't really need the `on()` function here, this line will work just fine:

```
$('#input[name="twitter"]').prop('checked', true);
```

Q: Windows.NET runtime 32-bit and 64-bit on same 32-bit system I am trying to understand how to get a .NET application (in my case an app within Visual Studio) to run in both 32-bit and 64-bit mode on a 64-bit operating system (Windows 7 x64), which also happens to run a 32-bit .NET runtime. I installed VS2010 (32-bit) on a 64-bit Vista machine (which I've since upgraded to Windows 7) and configured it to target the .NET framework 4.0, and I have also set the target of the solution to x86 (for the same version as VS2010). What I am wondering is if it will make any difference to the installation that my .NET framework is 32-bit (4.0) and my .NET runtime is 64-bit (4.5), or if I can target the .NET framework 4.0 and .NET runtime 4.5 as a 64-bit version on my machine. I hope that there is no driver or hardware issue that will prevent me from doing so, but my understanding is that there is no way to create a x64 build of the .NET runtime. One advantage of having a 32-bit app target the 32-bit .NET runtime is that in Visual Studio 2008 SP1, you don't have to install the 32-bit version of the .NET framework (since this is included with VS). However, in VS 2010, the 32-bit .NET framework is also provided, so what advantage is there in compiling the app to target a 32-bit runtime? Or perhaps I

2020-09-06 20:34:53 Q: how to get the list of registered domains in AD using powershell i am working on domain registration task and when i am doing this task with powershell, i am having a lot of problem, i want the following:-

1. Get the list of all registered domains in Active directory.
2. Get the list of all site collections in active directory.
3. Get the list of all our resources (Applications, user profiles, web sites )
4. Get the list of all our licenses
5. Get the list of all our computers.
6. Get the list of all our servers

Can anyone please help me to solve this issue? A: The most relevant links I can think of: Web

Application (SharePoint 2010) List Websites  
Getting the list of all servers and workstations

Get-ADComputer Get-ADDomain Get-ADUser

A: the following was my powershell code:-

```
$secp=Get-SPManagedAccount $ResGrp=Get-SPManagedGroup $SecObj=Get-SPSite $SecObj=Get-SPSite -Identity $site $SerObj=Get-ADComputer $SerObj=Get-ADComputer -Filter "*" $AppObj=Get-SPServiceApplication $AppObj=Get-SPServiceApplication -Filter "*" $UserprofObj=Get-SPUserProfile
```

```
$UserprofObj=Get-SPUserProfile -Identity username $SessAppObj=Get-SPSessionState
```

Q: iPhone - Open links in Safari App I'm trying to make it so that when the user clicks a link, it opens up in the safari app and not in the app.

```
if ([S3Manager isPresent]) [[S3Manager sharedManager] addSubview:someView]; else [self.navigationController
```

```
pushViewController:someView animated:NO];
```

I'm currently using the if/else statement. Is there a way to tell it to be like the Android

---

version of the app where if it is open, it goes there, else it goes to the home screen and the app displays? A:

УТ-FCeII\_СТ\_P2LUD9C Ищи исполняемый exe, работает он на сайте. Кроме того, такая комбинация не понравится маске во всех браузерах, которые могут брать файл и изначально переименовывать его. The invention relates to an arrangement for rotatably mounting a roll or roll package of printing paper in a printing machine,

---

comprising a sleeve on which a core shaft is rotatably mounted, and bearings for supporting the sleeve and a drive shaft having bearings. The drive shaft is mounted so as to be rotatable in a drive train mounted in the machine, and the drive shaft comprises a drive pinion which meshes with a drive gear provided in the machine. The publication EP 0 056 669 shows such an arrangement. The paper web is unwound from a roll, guided around a roll package and guided through an inking system for receiving printing ink. The paper web or paper for the roll package is guided around the roll package and through the machine by a wrapping station comprising a container in which the roll package is mounted to be rotatable. The roll package is rotatably mounted, with a drive shaft, in a sleeve which is rotatably mounted in a drive train of the machine. The drive shaft is mounted so as to be rotatable in the drive train and drives a drive gear mounted in the machine. In that embodiment, it is assumed

---

that the drive shaft, the sleeve and the sleeve pinion are constructed as one piece. In a further embodiment the sleeve and the sleeve pinion are constructed separate from each other. The sleeve and the sleeve pinion can be fitted to the drive shaft in a non-positive way, for example, by threading. The sleeve is mounted in a drive train of the printing machine
