## Need For Speed Shift 2 Unleashed Serial Number For Activation

a. the vpc sku is limited to having only the one license per appliance (and its user). normally, a new serial number would be a one-time deal. if a customer activates a gateway license, they get new serial number, but the old one is still tied to the gateway appliance. please note that if you already use a gateway license, you cannot activate a new gateway license while the gateway license is still active. the new gateway license will be automatically deactivated and a new license with the new serial number will be issued. a. in the past, the auto-digital certificate activation process changed from the configuration and all you have to do is generate the scc code and then enter this scc code in the new ca for the new serial number. however, the new process is now the serial number generation using the old-fashioned method of providing the serial number to cisco along with the activation code. the old method is deprecated and will be removed in a future release. it requires the customer to provide the serial number. the new method does not require the serial number to be entered. generate the new serial number and then enter the activation code received from your ise administrator. a. the method of activating the licenses for a customer was changed. in the past, the customer would call the support line, provide the activation code ( activation code you are receiving from the ise admin), and the support person would enter the activation code in the license portal and the activation would take place. in today's world, the activation code is provided as a link to a page in the cisco.com web site.
