when using standalone raytracing in a 3d package, the workflow will change entirely. the rendering engine will become the primary workflow tool. you will need to configure raytracing exactly as you do for 3d packages (even though v-ray has its own configuration system that is loaded from the 3d package.) for further details on using display key, please refer to display key extension . the display key extension is disabled by default, and is therefore not used by default when you start your vray session. in the year 200,000, a young blond girl named celine vray was kidnapped by a gang of smugglers, from which the vrays are still suffering the consequences today. basically, her father, a banker, had been forced to commit illegal activities to support his family, and this led to the kidnapping of celine. but that wasn't all. shortly after their kidnapping, celine's mother, muriel, who was a remarkable runner, developed a mysterious illness and died a year later. therefore, in order to survive, celine was kidnapped to learn, by pure chance, enough to run more than forty kilometers a day without stopping. this was the beginning of celine's journey. celine then joined the forces of the new republic as a runner and eventually became a medic in the army of the republic. however, the war began to take its toll on celine. at the same time, she was captured by bounty hunters and was offered to prince of mandalore himself, who was in search of the best medics to rebuild his army. you can see that at the height of the war, celine vray was brought to mandalore, where she was put to work as a healer. in addition, she realized that she was in love with a former member of the rebel alliance, a young female named lyssana. however, celine continued to trust in the jedi order. 5ec8ef588b
