Keep an eye on your blood and other blood related parameters with Blood Test Manager! A simple way to organize, store, manage and access blood parameter records. Add any blood related parameter, such as TSH, homocysteine, cortisol, cholesterol, triglycerides, DHEA, testosterone, and others to your database. Add new records for them, add values, edit, remove, create graphs, export and print them. If the parameter you want to monitor is missing from the database, add it yourself or let the database add it for you. Choose between both the 10-day and the 30-day graph view.Q: WPF Combobox with data binding & validation Hi all I am building a WPF window to allow a user to add a new record into a table. In this window I have created a combobox with two dropdown lists (one for Company and one for Role) as well as a textbox to enter a name. All of these have data binding and validation. I have implemented a custom event called Validated which is called when each control changes. If validation fails, it creates a MessageBox with the appropriate error message and then stops the form from being displayed. Now the user can navigate to the main window, select the option they want (Company and Role) and then enter a name. However, when I call the Validated function, it seems to fire before anything has happened. How can I delay the validation of the combobox until the user has made a selection? Here is the xaml for my combobox

Blood Test Manager is a reliable software that enables you to create your own digital record of blood parameters history. The software allows you to create a database of daily entries, in which to fill in the blood parameters values. For example, you can monitor blood sugar, cholesterol, triglycerides, lipo-proteins, hemoglobin, or fibrinogen. Daily entries for blood parameter values The daily variations of the substances in your blood can influence your health, can indicate illnesses, as well as help doctors correctly diagnose your condition. Keeping records of these daily values is like keeping your own medical record and it can come in useful especially for users who suffer from blood affecting conditions. Keeping a daily record of blood parameters can help doctors set a correct diagnosis in a shorter time. This is why Blood Test Manager allows you to create a database in which to enter the values of the supported parameters. You may select the date and have the entries get automatically sorted. Blood parameters kept under observation Blood Test Manager allows you to store values for a series of parameters, such as glucose, triglycerides, homocysteine, fibrinogen, CRP, cholesterol, hemoglobin A1C, TSH, Low-density lipo-protein, DHEA, testosterone, High-density lipo-protein and estradiol. You may easily enter a new set of values each day or on the selected date, as well as update the numbers in a particular day. The software offers you a unit converter, which allows you to turn International Units to Gravimetric Units, according to the system you are required to use. You may thus convert values for glucose, cholesterol, triglycerides, fibrinogen, DHES, PSA, homocysteine, C-Reactive Protein, testosteron and estradiol. Graphs and quick diagnosis Blood Test Manager can automatically generate a graph, for each entry in the database, indicating the level of the parameters in each day. You may use this visual representation to easily compare the values. Moreover, as you hover the cursor on top of the fields, the tool tips display the reference range for each parameter, so you may observe anomalies ahead of time.
