You can also add an operation to an existing macro. Create new projects Projects can be saved as a static macro or as a function. This is done by selecting the "Function" radio button at the bottom of the project window. Once you have selected the function, you can set the variables you want to have. To set a variable, you can simply enter the name of the variable at the top of the variables window. You can then define it in the variables window by selecting the plus button and choosing the type of data you want to store. You can then use the properties window to change the name, color and type of the data in your data window. Once you have set all the variables, you can click the "Build" button at the bottom right of the window. This will create a new project with 2edc1e01e8
