

## NBTscan-Ipanto Crack [32|64bit] (April-2022)

### NBTscan-Ipanto Crack + With Keygen PC/Windows

NBTscan-Ipanto 2022 Crack is a Windows NT/2000/XP/2003/Vista/2008/Windows 7/8.1/10 command line utility to scan for NetBIOS names on a remote or local IP network and return the connected hosts to the NT domain. NBTscan-Ipanto is designed not to flood the ARP tables and firewalls and to resolve NetBIOS names to network addresses. Version 1.3.0 includes the following changes: \* Improved results report \* Windows 2000/XP/2003 are supported \* Windows Vista/2008/Windows 7/8.1/10 support \* System requirements: \* Windows 2000/XP/2003/Vista/2008/Windows 7/8.1/10 \* Microsoft.NET Framework 4.0 \* At least 20 MB RAM # If you did not install Zabbix Agent for Windows or you used Windows Update, use command 'nbtscan' # If you installed Zabbix Agent for Windows and used Zabbix Agent for Windows uninstaller, use 'nbtscan -u' # # # You can also use hping3 command: # # # Locate netBIOS names on a remote or local network # hping3 -n -c 1 -l 2> /dev/null # # # When you use -l parameter with hping3 you will see the responses for remote TCP/IP devices. # # If you want to be able to remotely control a TCP/IP device using hping3, you must install hping3 remote control daemon: # # # Zabbix Agent for Windows can start hping3 remote control daemon for you # zabbix-agentd -c hping3 # # Locate NetBIOS names on a remote or local network (tunnel) # # When you use -n parameter with hping3 you will see all the responses for remote and local hosts. # # Example: hping3 -n -c 1 -l 192.168.1.1 -a 192.168.1.100 2> /dev/null # # # hping3 allows to capture packets at any point in time. The parameter -c 1 will tell hping3 to send one packet

### NBTscan-Ipanto (Latest)

KEYMACRO is a keyword macro that replace the MAC address in the word and in the end all the mac fields in the line are replaced by the keyword. KEYMACRO is very useful when you have to copy and paste a large line of text and when the mac address must not be modified. Another advantage is that you don't have to select the line, you just have to press a button and all the mac fields will be replaced by the keymacro... KEYMACRO can use: \* keywords (keywords can be defined at start of the program.keywords=login,password,pswd...) \* the word with MAC address (it can be any field of any field in the line) \* the first field of the line (i.e. the MAC address of the network card) \* the second field of the line (i.e. the username connected on the network card) \* the third field of the line (i.e. the password connected on the network card) \* the fourth field of the line (i.e. the process name connected on the network card) \* the fifth field of the line (i.e. the username connected on the network card) \* the sixth field of the line (i.e. the password connected on the network card) KEYMACRO command line usage: Keymacro -mac= -macuser= -macpass= -macpwd= -keywords= Keymacro command line example: > keymacro -mac=00:11:22:33:44:55 -macuser=test -macpass=test123 -macpwd=testpassword -keywords=login,pswd \*OR\* > keymacro -mac=00:11:22:33:44:55 -macuser=test -macpass=test123 -keywords=login,password,pswd \*OR\* > keymacro -mac=00:11:22:33:44:55 -macuser=test -macpass=test123 -keywords=pswd,pswd 2edc1e01e8
