There may have been a video-savers-in-training effect for people who had used the optional drawing tablet in Photoshop 5, but not people who had been using the interface as it existed in versions earlier than Photoshop 5.0. I'm delighted to continue my Photoshop review on the iPad Pro, and remember how the combination of these two devices feels like they were made for one another. I am a user—not merely a very regular reviewer—of Photoshop and Lightroom on the iPad Pro, which both are far superior to their desktop software counterparts. Not only does it make for a much more enjoyable viewing and editing experience, but it forces you to be more creative (and make less mistakes). When, in Years of Experience, I decided to upgrade from my iPhone to an iPad I felt that it was time

to make the same sort of shift. After all, I'm still trying to be realistic: iPad Pro is a product born of the modern world, a wide set of creators who need something powerful for everything from image editing and video creation to work and play. It is, ultimately, a computer of the future—the form factor of the next incremental leap forward.
