Apart from the fact that the main use case of iOS — being able to view the photo on the go — is limited to iPhone 6S and 6S Plus, there does not seem to be any distinguishing factor between Android and iOS. For example, no apps on Android are present by default to launch (or even suggest) a Viewer in Lightroom mobile apps, which is a Bluetooth-enabled remote pc, shielded from active internet access, which is optional, and designed to work with Lightroom CC I can't say enough about the price point as it ranges from free (Lightroom mobile) to less than a \$2.99 (Lightroom mobile), and is even available on all major platforms, unlike Lightroom CC. Apart from the fact that Lightroom CC lacks mobile apps by default, Android is not natively supported and it's always lacking in speed. In addition to the cloud version, there is a desktop version of Photoshop. Lightroom 5 includes an organization system based on Lightroom to way to your photos and perform adjustments and actions. You can create folder groups - one for work related images, one for travel, one for high school work, and so on. You then can organize these folders by using the Organize and Sort panel. The new version has a Fullscreen panel for Photoshop detail views. There's a new Print Production panel where you can see the Printer Properties for different print sizes and resolutions. There is a Grid for Resize option which let you zoom in, out, and then resize screens at the same time. It works substantially like Photoshop's grid system, but is not the same. There's also new a Grid for Rotate option which allows you to rotate images around a new center point, rather than separately.
