Fantastic product with groundbreaking features, and now up to version 9. I find it very misleading that several of the reviewers have recommended it for Linux. A very large part of the user base has no choice in operating system. I have an iMac, and it runs the Mac OS X software. What good is this if it is a 32 bit operating system, we don't have direct access to the files and a well functioned 64 bit, yet we can't fairly rate a product? This is the same with Linux. I am constantly disappointed by the release dates of products and the size of the icon covers everything on a toolbar. I know the hardware capabilities of a product, but not the product. These two factors alone are enough to make me never purchase any software from Adobe. Just look at the size of that icon on the toolbar. Microsoft and most of the other OS are much better at this. I have owned it for over a year now.) Vivid on all accounts and I would not trade this tool for the dominant Microsoft Office suite. It's the best and most reliable program in the business for the types of projects I shoot. I am spoiled in this respect and every photographer should be too. It's much more frustrating and time consuming to get into the rogue's gallery--or user interface, as Adobe would have you believe--than to get into a product like Photoshop that knows how to be. I've had lots of you-know-what with Microsoft products and this one is no exception! I've owned Photoshop CS4 for almost two years and I'm not alone in my dissatisfaction with Adobe. I have the previous version, photoshop 7, but Photoshop CS5 simply does not work for me. The authoring and import feature on version 7 are superb, but that alone has not made me back to Photoshop CS4.
